Types of Needle Walls

The Thin Wall needle wall design is thinner than a Regular Wall needle. The inner diameter is bigger without any increase in the outside diameter. For example, a 21 gauge Thin Wall needle has the same outside diameter as a 21 gauge Regular Wall, but has the same inner diameter as a 20 gauge needle. Thin Wall allows the same flow volume as a standard walled needle one gauge larger. Thin Wall is available in 18, 19, 21, 22, and 23 gauge sizes.

Types of Needle Bevels

BD PrecisionGlide™ Needles with X3 Point are stainless steel with translucent, color-coded polypropylene hubs. They are autoclavable after removing from their easy peel package. They can be sterilized by Ethylene Oxide in their easy peel package.
